

A Breath of Fresh Air on the Keg Market

FASSKEG QCG GmbH has been a new German keg supplier in the highly competitive keg market since April 2023, offering STAINLESS STEEL ONE-WAY and RETURNABLE KEGs from EU and own international production. As a German business partner, FASSKEG QCG GmbH offers its customers the usual payment and leasing conditions in Europe as part of fast and reliable order processing. Compliance with all EU regulations is guaranteed, as is a possible conformity assessment of the kegs for German customers.

Edelstahl-Einwegfass
Single-use KEG

EURO/ DIN/ SLIMKEGS made of STAINLESS STEEL

The stainless steel variants commonly used in Europe in stackable and non-stackable versions are configured and offered according to customer requirements and delivered on a project-specific basis in the event of an order. Of course, brewery-specific lettering can be embossed on the stainless steel handle, but also embossed with paint or laser-marked according to customer requirements. Color rings, laser marking and color printing on the cylindrical

surfaces or between the beads are also included in the delivery program. FASSKEG QCG GmbH offers a particularly wide range of variants for the trend and future container, the slim keg = SLIMKEG.

UHF RFID transponder/ BAR-CODE/ DATAMATRIX

More and more breweries want their kegs to be traceable, if only to know how old, and how many cycles the gasket of the spear has completed. With welded-on UHF RFID transponders,

kegs can be easily tracked and entire pallets can be recorded at the same time. Data can be collected more cost-effectively with a barcode or even better with a 2D DATAMATRIX code. No matter which system FASSKEG QCG customers choose, and no matter where the application is to be positioned on the keg, FASSKEG QCG GMBH will implement the requirements.

BUDGETKEG – 20 liter SLIM-KEG with stackable plastic handles

It would be a dream for every owner or financial manager of a company in the beverage industry to be able to purchase their keg at a deposit price. So the target purchase price is at the deposit price level of 30 €! In the case of the previous SLIMKEGS with plastic handles, the known material thicknesses were used to produce standard kegs in order to generate sufficient rigidity when filling the kegs, which means that the target price of € 30.00 is unattainable.

The FASSKEG QCG GmbH development department has now created a stable lightweight keg with 0.8 mm material thickness, an individual, modified design on the lid, a shortened sleeve that saves material and offers high strength thanks to reduced shear forces. FASSKEG QCG GmbH can sup-

ply such a keg, excluding fitting, at a target price of € 30.00 and including a spear of types S/A/G for the purchase of a 40" container DAP EU room for € 39.00.

SPEARS – OUR OWN BRAND

Every shareholder in FASSKEG QCG GmbH has been involved in the construction of kegs and the associated spears for more than 30 years. For this reason, a strategic partner was sought for the production of the house brand spears – type FASSKEG. Material selection, processing, spring forces and sealing material are certified and are in no way inferior to the fittings of the world market leader in terms of design and quality.

REUSABLE SPECIAL KEG

For the production of demineralized water, a BUDEGETKEG version with a stainless steel neck, laser welded from the inside and outside, with a 2-1/2" - NSPM internal thread, was developed. This cost-effective "cartridge" can be used universally and is a real alternative to plastic solutions.

ONE-WAY KEG WORLDKEG

FASSKEG QCG GmbH is the world's only provider of reusable and dispos-

able keg solutions to offer a patented, thin-walled (0.3 mm material thickness), three-part stainless steel disposable keg. The tamper-proof keg, already known on the market under the product name WORLDKEG, is technologically and technically 100% comparable with the reusable products of FASSKEG QCG GmbH and is the only disposable keg that already guarantees a worldwide recycling rate of over 90%!

The WORLDKEG one-way keg is immediately available in the 285 mm diameter version with 25 & 30 liter capacity, equipped with the individual one-way fitting of the WORLDKEG type. A 50 liter one-way version with a diameter of 380 mm and one-way fittings in the S/D type version is currently under development.

CONCLUSION

FASSKEG QCG GmbH is the world's only supplier of stainless steel reusable and disposable kegs, including the associated fitting solutions. Innovative concepts can save material and therefore also costs. FASSKEG QCG GmbH sets new standards for keg design options in the field of laser marking and color-highlighted embossing on the handle. The use of the international production facilities owned by the company enables FASSKEG QCG GmbH customers to benefit from favorable purchasing conditions. ←
